including the intestine (PubMed:11097838, PubMed:11278579, PubMed:11248124
PubMed:15184369, PubMed:23612980). Important for normal Ca(2+) ion homeostasis in the
body, including bone and skin (By similarity). The channel is activated by low internal calcium
level, probably including intracellular calcium store depletion, and the current exhibits an inward
rectification (PubMed:15184369). Inactivation includes both a rapid Ca(2+)-dependent and a
slower Ca(2+)-calmodulin-dependent mechanism, the latter may be regulated by
phosphorylation. In vitro, is slowly inhibited by $Mg(2+)$ in a voltage-independent manner.
Heteromeric assembly with TRPV5 seems to modify channel properties. TRPV5-TRPV6
heteromultimeric concatemers exhibit voltage-dependent gating.
