Target Details

Target:	TRAPPC10 (TMEM1)
Alternative Name:	TMEM1 (TMEM1 Products)
Background:	Background: Plays a role during embryonic arterial endothelium differentiation and vascular morphogenesis through the ACVRL1 receptor-dependent signaling pathway upon stimulation

Target Details

by bone morphogenetic proteins, such as GDF2/BMP9 and BMP10. Involved in the regulation of nociception, acting as a modulator of the interaction between TRPA1 and TRPV1, two molecular sensors and mediators of pain signals in dorsal root ganglia (DRG) neurons. Mechanistically, it weakens their interaction, thereby releasing the inhibition of TRPA1 by TRPV1 and increasing the single-channel open probability of the TRPA1-TRPV1 complex. Aliases: TMEM100 antibody, Transmembrane protein 100 antibody

UniProt: [Q9NV29](#)
