Target Details

Target:	TRIB3

Background:	Background: Disrupts insulin signaling by binding directly to Akt kinases and blocking their activation. May bind directly to and mask the '\Thr-308\' phosphorylation site in AKT1. Binds

Target Details

to ATF4 and inhibits its transcriptional activation activity. Interacts with the NF-kappa-B transactivator p65 RELA and inhibits its phosphorylation and thus its transcriptional activation activity. Interacts with MAPK kinases and regulates activation of MAP kinases. May play a role in programmed neuronal cell death but does not appear to affect non-neuronal cells. Does not display kinase activity. Inhibits the transcriptional activity of DDIT3/CHOP and is involved in DDIT3/CHOP-dependent cell death during ER stress. Can inhibit APOBEC3A editing of nuclear DNA.
