Target Details

Target:	UBL4A
Alternative Name:	UBL4A (UBL4A Products)
Background:	Background: Component of the BAT3 complex, a multiprotein complex involved in the post-
	translational delivery of tail-anchored (TA) membrane proteins to the endoplasmic reticulum

membrane. TA membrane proteins, also named type II transmembrane proteins, contain a single C-terminal transmembrane region. The complex acts by facilitating TA proteins capture by ASNA1/TRC40: it is recruited to ribosomes synthesizing membrane proteins, interacts with the transmembrane region of newly released TA proteins, and transfers them to ASNA1/TRC40 for targeting.
