cytokines and chemokines. Binding of ULBPs ligands to KLRK1/NKG2D induces calcium
mobilization and activation of the JAK2, STAT5, ERK and PI3K kinase/Akt signal transduction
pathway. In CMV infected cells, interacts with soluble CMV glycoprotein UL16. The interaction
with UL16 blocked the interaction with the KLRK1/NKG2D receptor, providing a mechanism by
which CMV infected cells might escape the immune system. UL16 also causes ULBP1 to be
retained in the ER and cis-Golgi apparatus so that it does not reach the cell surface.
