	carbons to the chain of long- and very long-chain fatty acids/VLCFAs per cycle. This enzyme
	catalyzes the dehydration of the 3-hydroxyacyl-CoA intermediate into trans-2,3-enoyl-CoA,
	within each cycle of fatty acid elongation. Thereby, it participates in the production of VLCFAs
	of different chain lengths that are involved in multiple biological processes as precursors of
	membrane lipids and lipid mediators. May be involved in Rac1-signaling pathways leading to
	the modulation of gene expression. Promotes insulin receptor/INSR autophosphorylation and i
	involved in INSR internalization (PubMed:25687571).
