Target Details

SNAREs on the target membrane. These interactions are proposed to mediate aspects of the specificity of vesicle trafficking and to promote fusion of the lipid bilayers. Involved in vesicular transport from the late endosomes to the trans-Golgi network. Along with VAMP7, involved in an non-conventional RAB1-dependent traffic route to the cell surface used by KCNIP1 and KCND2. May be involved in increased cytokine secretion associated with cellular senescence. Aliases: MMDS3 antibody, MVti1 antibody, SNARE Vti1a beta protein antibody, Vesicle transport through interaction with t-SNAREs homolog 1A antibody, Vesicle transport through interaction with tSNAREs homolog 1A (yeast) antibody, Vesicle transport v-SNARE protein Vti1-like 2 antibody, Vti1 rp2 antibody, Vti1-rp2 antibody, Vti1a antibody, VT11A vesicle transport through interaction with t-SNAREs 1A antibody, VT11A_HUMAN antibody, VT11RP2 antibody
