	core component of the putative HOPS and CORVET endosomal tethering complexes which are
	proposed to be involved in the Rab5-to-Rab7 endosome conversion probably implicating
	MON1A/B, and via binding SNAREs and SNARE complexes to mediate tethering and docking
	events during SNARE-mediated membrane fusion. The HOPS complex is proposed to be
	recruited to Rab7 on the late endosomal membrane and to regulate late endocytic, phagocytic
	and autophagic traffic towards lysosomes. The CORVET complex is proposed to function as a
	Rab5 effector to mediate early endosome fusion probably in specific endosome
	subpopulations (PubMed:11382755, PubMed:23351085, PubMed:24554770,
	PubMed:25266290, PubMed:25783203). Required for recruitment of VPS33A to the HOPS
	complex (PubMed:23901104). Required for fusion of endosomes and autophagosomes with
	lysosomes, the function is dependent on its association with VPS33A but not VPS33B
	(PubMed:25783203). The function in autophagosome-lysosome fusion implicates STX17 but
	not UVRAG (PubMed:24554770).
	Aliases: Vacuolar protein sorting-associated protein 16 homolog (hVPS16), VPS16
