Target Details

Background:	Synonyms: HGAL, GCAT2, GCET2, Germinal center-associated signaling and motility protein,
	Germinal center B-cell-expressed transcript 2 protein, Germinal center-associated lymphoma
	protein, GCSAM, GAL
	Background: Involved in the negative regulation of lymphocyte motility. It mediates the
	migration-inhibitory effects of IL6. Serves as a positive regulator of the RhoA signaling pathway.
	Enhancement of RhoA activation results in inhibition of lymphocyte and lymphoma cell motility
	by activation of its downstream effector ROCK. Is a regulator of B-cell receptor signaling, that
	acts through SYK kinase activation.
