	matrix, promotes cross-linking of extracellular matrix proteins by mediating oxidative
	deamination of peptidyl lysine residues in precursors to fibrous collagen and elastin. Acts as a
	regulator of sprouting angiogenesis, probably via collagen IV scaffolding. When nuclear, acts as
	a transcription corepressor and specifically mediates deamination of trimethylated Lys-4 of
	histone H3 (H3K4me3), a specific tag for epigenetic transcriptional activation. Involved in
	epithelial to mesenchymal transition (EMT) via interaction with SNAI1 and participates in
	repression of E-cadherin, probably by mediating deamination of histone H3 By similarity. Acts
	as a regulator of chondrocyte differentiation, probably by regulating expression of factors that
	control chondrocyte differentiation.
