	LPHB, Prostatein like lipophilin B, SCGB1D2, Secretoglobin family 1D member 2,
	SG1D2_HUMAN.
	Background: The protein encoded by this gene is a member of the lipophilin subfamily, part of
	the uteroglobin superfamily, and is an ortholog of prostatein, the major secretory glycoprotein
	of the rat ventral prostate gland. Lipophilin gene products are widely expressed in normal
	tissues, especially in endocrine-responsive organs. Assuming that human lipophilins are the
	functional counterparts of prostatein, they may be transcriptionally regulated by steroid
	hormones, with the ability to bind androgens, other steroids and possibly bind and concentrate
	estramustine, a chemotherapeutic agent widely used for prostate cancer. Although the gene
	has been reported to be on chromosome 10, this sequence appears to be from a cluster of
	genes on chromosome 11 that includes mammaglobin 2.
