	lysosomes by a pathway that is independent of the mannose-6-phosphate receptor (M6PR).
	Also required for protein transport from the Golgi apparatus to the endosomes. Promotes
	neuronal apoptosis by mediating endocytosis of the proapoptotic precursor forms of BDNF
	(proBDNF) and NGFB (proNGFB). Also acts as a receptor for neurotensin. May promote
	mineralization of the extracellular matrix during osteogenic differentiation by scavenging
	extracellular LPL. Probably required in adipocytes for the formation of specialized storage
	vesicles containing the glucose transporter SLC2A4/GLUT4 (GLUT4 storage vesicles, or GSVs).
	These vesicles provide a stable pool of SLC2A4 and confer increased responsiveness to insulin.
	May also mediate transport from the endoplasmic reticulum to the Golgi.
	Aliases: Sort1 antibody, Sortilin antibody, Glycoprotein 110 antibody, Gp110 antibody,
	Neurotensin receptor 3 antibody, NTR3 antibody
