Alternative Name: MARVELD1 ([MARVELD1 Products](#))

Background: Synonyms: GB14, MARVD1, MARVEL membrane-associating domain containing 1, MARVEL domain containing protein 1, MRVLDC1, Putative MARVEL domain containing protein 1, MALD1_HUMAN.

Background: MARVELD1, (MARVEL domain-containing 1), is one of the MARVEL (MAL and related proteins for vesicle trafficking and membrane link) domain-containing proteins. It is a nuclear-localized protein that is widely expressed in normal human tissues. While it has been reported to be overexpressed in colon cancer, MARVELD1 protein levels are generally lower in several primary tumors including ovary, breast, kidney, bladder and liver. This lower level of MARVELD1 expression in tumors is thought to be due to a higher methylation status of the MARVELD1 promoter as treatment of MDA-MB-361 with 5-aza-2'-deoxycytidine restores MARVELD1 expression, suggesting that loss of MARVELD1 expression may contribute to tumorigenicity.
