9B, GDF-9B, GDF9B, Growth/dferentiation factor 9B, ODG2, POF4.
Background: The BMP15 protein is a member of the bone morphogenetic protein family which
is part of the transforming growth factor beta superfamily. The transforming growth factor beta
superfamily includes large families of growth and differentiation factors. It is thought that
BMP15 may be involved in oocyte maturation and follicular development as a homodimer, or by
forming heterodimers with a related protein, Gdf9.
