## Target Details

Target:	BAX
Alternative Name:	BAX (BAX Products)
Background:	Description: The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are
	involved in a wide variety of cellular activities. This protein forms a heterodimer with BCL2, and
	functions as an apoptotic activator. The association and the ratio of BAX to BCL2 also

	determines survival or death of a cell following an apoptotic stimulus. This protein is reported to interact with, and increase the opening of, the mitochondrial voltage-dependent anion channel (VDAC), which leads to the loss in membrane potential and the release of cytochrome c. The expression of this gene is regulated by the tumor suppressor P53 and has been shown to be involved in P53-mediated apoptosis. Multiple alternatively spliced transcript variants, which encode different isoforms, have been reported for this gene. Aliases: BCL2L4
