Datasheet for ABIN7193610 anti-HAS1 antibody

8 Images

Overview

Quantity:	0.1 mg
Target:	HAS1
Reactivity:	Human, Mouse
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This HAS1 antibody is un-conjugated
Application:	Western Blotting (WB), ELISA, Immunohistochemistry (IHC), Flow Cytometry (FACS), Immunocytochemistry (ICC)

Product Details

Immunogen:	Purified recombinant fragment of human HAS1 (AA: (74-399)) expressed in E. coli.
Clone:	5C9D6
Isotype:	lgG2b
Purification:	purified

Target Details

Target:	HAS1
Alternative Name:	HAS1 (HAS1 Products)
Background:	Description: Hyaluronan or hyaluronic acid (HA) is a high molecular weight unbranched polysaccharide synthesized by a wide variety of organisms from bacteria to mammals, and is a constituent of the extracellular matrix. It consists of alternating glucuronic acid and N-

acetylglucosamine residues that are linked by beta-1-3 and beta-1-4 glycosidic bonds. HA is	
synthesized by membrane-bound synthase at the inner surface of the plasma membrane, and	
the chains are extruded through pore-like structures into the extracellular space. It serves a	
variety of functions, including space filling, lubrication of joints, and provision of a matrix	
through which cells can migrate. HA is actively produced during wound healing and tissue	
repair to provide a framework for ingrowth of blood vessels and fibroblasts. Changes in the	
serum concentration of HA are associated with inflammatory and degenerative arthropathies	
such as rheumatoid arthritis. In addition, the interaction of HA with the leukocyte receptor CD44	
is important in tissue-specific homing by leukocytes, and overexpression of HA receptors has	
been correlated with tumor metastasis. HAS1 is a member of the newly identified vertebrate	
gene family encoding putative hyaluronan synthases, and its amino acid sequence shows	
significant homology to the hasA gene product of Streptococcus pyogenes, a	
glycosaminoglycan synthetase (DG42) from Xenopus laevis, and a recently described murine	
hyaluronan synthase. Alternative splicing results in multiple transcript variants. [provided by	
RefSeq, Jul 2014]	
Aliases: HAS	

Molecular Weight:	65 kDa
Gene ID:	3036
Pathways:	Glycosaminoglycan Metabolic Process
Application Details	
Application Notes:	WB:1:500 - 1:2000, IHC:1:200 - 1:1000, ICC:1:200 - 1:1000, FCM:1:200 - 1:400, ELISA:1:10000,
Restrictions:	For Research Use only
Handling	
Buffer:	Purified antibody in PBS with 0.05 % sodium azide
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which
	should be handled by trained staff only.
Storage:	4 °C/-20 °C

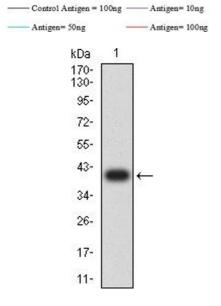

Storage Comment: 4°C, -20°C for long term storage

Serial Dilutions of Antibody

Immunofluorescence

Image 1. Immunofluorescence analysis of Hela cells using HAS1 mouse mAb (green). Blue: DRAQ5 fluorescent DNA dye. Red: Actin filaments have been labeled with Alexa Fluor- 555 phalloidin. Secondary antibody from Fisher (Cat#: 35503)

ELISA

Image 2. Black line: Control Antigen (100 ng),Purple line: Antigen (10 ng), Blue line: Antigen (50 ng), Red line:Antigen (100 ng)

Western Blotting

Image 3. Western blot analysis using HAS1 mAb against human HAS1 (AA: 74-399) recombinant protein. (Expected MW is 40.2 kDa)

Please check the product details page for more images. Overall 8 images are available for ABIN7193610.
