	Background: Water channel (PubMed:24120416). Channel activity is down-regulated by CALM
	when cytoplasmic Ca(2+) levels are increased. May be responsible for regulating the osmolarity
	of the lens. Interactions between homotetramers from adjoining membranes may stabilize cell
	junctions in the eye lens core (By similarity). Plays a role in cell-to-cell adhesion and facilitates
	gap junction coupling (PubMed:24120416).
