Target Details		
Alternative Name:	Tie2/CD202b (TEK Products)	
Background:	Background: TEK, or TIE-2, is an endothelial cell-specific receptor tyrosine kinase (RTK) that is	
	known as a functioning molecule of vascular endothelial cells. TEK comprises a subfamily of	
	RTK with TIE, and these two receptors play critical roles in vascular maturation, maintenance of	
	integrity and remodeling. Targeted mutagenesis of both Tek and its agonistic ligand,	
	Angiopoietin-1, result in embryonic lethality, demonstrating that the signal transduction	
	pathways mediated by this receptor are crucial for normal embryonic development. TEK	
	signaling is indispensable for the development of the embryonic vasculature and suggests that	
	TEK signaling may also be required for the development of the tumor vasculature.	
	Synonym: AA517024,Cd202b,Hyk,STK1,Tie-2,Tie2
