Datasheet for ABIN7198583

**UBE2G1 Protein**

## Overview

Quantity:	100 µg
Target:	UBE2G1 (Ube2g1)
Origin:	Human
Source:	Escherichia coli (E. coli)
Protein Type:	Recombinant

## Product Details

Purpose:	Recombinant Human UBE2G1 Protein
Sequence:	Met 1-Glu 170
Characteristics:	A DNA sequence encoding the human UBE2G1 (P62253) (Met 1-Glu 170) was expressed and purified, with additional two amino acids (Gly & Pro) at the N-terminus.
Purity:	> 85 % as determined by reducing SDS-PAGE.

## Target Details

Target:	UBE2G1 (Ube2g1)
Alternative Name:	UBE2G1 ( <a href="#">Ube2g1 Products</a> )
Background:	Background: UBE2G1 is a member of the ubiquitin-conjugating E2 family whose members perform the second step in the ubiquitination reaction. Initially identified as the main process for protein degradation, ubiquitination is believed nowadays to be crucial for a wider range of cellular processes. The outcome of the ubiquitin-conjugation reaction, and thereby the fate of the substrate, is heavily dependent on the number of ubiquitin molecules attached and how

## Target Details

these ubiquitin molecules are inter-connected. To deal with this complexity and to allow adequate ubiquitination in time and space, a highly sophisticated conjugation machinery has been developed. In a sequential manner, ubiquitin becomes activated by an ubiquitin-activating enzyme (E1), which then transfers the ubiquitin to a group of ubiquitin-conjugating enzymes (E2s). Next, ubiquitin-loaded E2s are interacting with ubiquitin protein ligases (E3s) and ubiquitin is conjugated to substrates on recruitment by the E3. These three key enzymes are operating in a hierarchical system, wherein two E1s and 35 E2s have been found and hundreds of E3s have been identified in humans.

Synonym: E217K;UBC7;UBE2G

Molecular Weight:	19.5 kDa
-------------------	----------

UniProt:	<a href="#">P62253</a>
----------	------------------------

## Application Details

Restrictions:	For Research Use only
---------------	-----------------------

## Handling

Format:	Lyophilized
---------	-------------

Reconstitution:	Please refer to the printed manual for detailed information.
-----------------	--

Buffer:	Lyophilized from sterile PBS, 10 % glycerol, pH 7.5
---------	---

Storage:	4 °C,-20 °C,-80 °C
----------	--------------------

Storage Comment:	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
