Target Details

| Background: | Rabbit Anti-IL-4 Polyclonal Antibody,IL4, Interleukin-4, IL-4, B-cell stimulatory factor 1, BSF-1, |
|---------------------|--|
| | Binetrakin, Lymphocyte stimulatory factor 1, Pitrakinra,Interleukin-4 encoded by IL4 is a |
| | pleiotropic cytokine produced by activated T cells. This cytokine is a ligand for interleukin 4 |
| | receptor. The interleukin 4 receptor also binds to IL13, which may contribute to many |
| | overlapping functions of this cytokine and IL13. STAT6, a signal transducer and activator of |
| | transcription, has been shown to play a central role in mediating the immune regulatory signal |
| | of this cytokine. This gene, IL3, IL5, IL13, and CSF2 form a cytokine gene cluster on |
| | chromosome 5q, with this gene particularly close to IL13. This gene, IL13 and IL5 are found to |
| | be regulated coordinately by several long-range regulatory elements in an over 120 kilobase |
| | range on the chromosome. Two alternatively spliced transcript variants of this gene encoding |
| | distinct isoforms have been reported.,Interleukin-4 |
