## Target Details

Background:	Rabbit Anti-SREBP-1 Polyclonal Antibody,SREBF1, BHLHD1, SREBP1, Sterol regulatory element-
	binding protein 1, SREBP-1, Class D basic helix-loop-helix protein 1, bHLHd1, Sterol regulatory
	element-binding transcription factor 1,SREBF1 encodes a transcription factor that binds to the
	sterol regulatory element-1 (SRE1), which is a decamer flanking the low density lipoprotein
	receptor gene and some genes involved in sterol biosynthesis. Sterol regulatory element-
	binding protein 1 is synthesized as a precursor that is attached to the nuclear membrane and
	endoplasmic reticulum. Following cleavage, the mature protein translocates to the nucleus and
	activates transcription by binding to the SRE1. Sterols inhibit the cleavage of the precursor, and
	the mature nuclear form is rapidly catabolized, thereby reducing transcription. The protein is a
	member of the basic helix-loop-helix-leucine zipper (bHLH-Zip) transcription factor family. This
	gene is located within the Smith-Magenis syndrome region on chromosome 17.,Sterol
	regulatory element-binding protein 1
