Background:	This gene encodes a member of an adapter protein family that binds to several tyrosine- phosphorylated proteins. The product of this gene has several SH2 and SH3 domains (src-
	homology domains) and is involved in several signaling pathways, recruiting cytoplasmic proteins in the vicinity of tyrosine kinase through SH2-phosphotyrosine interaction. The N-

	whereas the C-terminal SH3 domain functions as a negative regulator of transformation. Two
	alternative transcripts encoding different isoforms with distinct biological activity have been
	described.
