Background:	Synonyms: AAA, AD1, PN2, ABPP, APPI, CVAP, ABETA, PN-II, CTFgamma, Amyloid beta A4
	protein, APP, Alzheimer disease amyloid protein, Cerebral vascular amyloid peptide, PreA4,
	Protease nexin-II, A4
	Background: The cerebral and vascular plaques associated with Alzheimer's disease are mainly
	composed of Amyloid beta peptides. beta Amyloid is derived from cleavage of the Amyloid
	precursor protein and varies in length from 39 to 43 amino acids. beta Amyloid [1-40], beta
	Amyloid [1-42], and beta Amyloid [1-43] peptides result from cleavage of Amyloid precursor
	protein after residues 40, 42, and 43, respectively. The cleavage takes place by gamma-
	secretase during the last Amyloid precursor protein processing step. beta Amyloid [1-40], beta
	Amyloid [1-42], and beta Amyloid [1-43] peptides are major constituents of the plaques and
	tangles that occur in Alzheimer's disease. beta Amyloid and peptides have been developed as
	tools for elucidating the biology of Alzheimer's disease.
