Target Details

Target:	MYOZ2
Alternative Name:	MYOZ2 (MYOZ2 Products)
Background:	MYOZ2 (Myozenin 2) is a Protein Coding gene. Diseases associated with MYOZ2 include
	Cardiomyopathy, Hypertrophic, 16 and Myoz2-Related Familial Hypertrophic Cardiomyopathy.
	GO annotations related to this gene include actin binding and telethonin binding. An important
	paralog of this gene is MYOZ1. The protein encoded by this gene belongs to a family of

sarcomeric proteins that bind to calcineurin, a phosphatase involved in calcium-dependent signal transduction in diverse cell types. These family members tether calcineurin to alphaactinin at the z-line of the sarcomere of cardiac and skeletal muscle cells, and thus they are important for calcineurin signaling. Mutations in this gene cause cardiomyopathy familial hypertrophic type 16, a hereditary heart disorder.
