Target Details

Target:	UBE2G2	
Alternative Name:	UBE2G2 (UBE2G2 Products)	
Background:	The modification of proteins with ubiquitin is an important cellular mechanism for targeting	
	abnormal or short-lived proteins for degradation. Ubiquitination involves at least three classes	
	of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or E2s, and	
	ubiquitin-protein ligases, or E3s. This gene encodes a member of the E2 ubiquitin-conjugating

enzyme family. The encoded protein shares 100 % sequence identity with the mouse counterpart. This gene is ubiquitously expressed, with high expression seen in adult muscle. Three alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
