Target Details

Target:	GDF2
Alternative Name:	GDF2 (GDF2 Products)
Background:	The protein encoded by this gene is a member of the bone morphogenetic protein (BMP) family and the TGF-beta superfamily. This group of proteins is characterized by a polybasic proteolytic
	processing site which is cleaved to produce a mature protein containing seven conserved
	cysteine residues. The members of this family are regulators of cell growth and differentiation

Target Details

	in both embryonic and adult tissues. Studies in rodents suggest that this protein plays a role in the adult liver and in differentiation of cholinergic central nervous system neurons. Mutations in
	this gene are associated with hereditary hemorrhagic telangiectasia.
