Target Details

Target:	RAD51C
Alternative Name:	RAD51C (RAD51C Products)
Background:	This gene is a member of the RAD51 family. RAD51 family members are highly similar to bacterial RecA and Saccharomyces cerevisiae Rad51 and are known to be involved in the
	homologous recombination and repair of DNA. This protein can interact with other RAD51
	paralogs and is reported to be important for Holliday junction resolution. Mutations in this gene

	are associated with Fanconi anemia-like syndrome. This gene is one of four localized to a
	region of chromosome 17q23 where amplification occurs frequently in breast tumors.
	Overexpression of the four genes during amplification has been observed and suggests a
	possible role in tumor progression. Alternative splicing results in multiple transcript variants.
