## Target Details

Target:	UHRF2
Alternative Name:	Uhrf2 ( <a href="#">UHRF2 Products</a> )
Background:	This gene encodes a nuclear protein which is involved in cell-cycle regulation. The encoded protein is a ubiquitin-ligase capable of ubiquinating PCNP (PEST-containing nuclear protein), and together they may play a role in tumorigenesis. The encoded protein contains an NHRF_N domain, a PHD finger, a set- and ring-associated (SRA) domain, and a RING finger domain and

several of these domains have been shown to be essential for the regulation of cell proliferation. This protein may also have a role in intranuclear degradation of polyglutamine aggregates. Alternative splicing results in multiple transcript variants some of which are non-protein coding.
