## Target Details

Target:	SLC25A27
Alternative Name:	SLC25A27 (SLC25A27 Products)
Background:	Mitochondrial uncoupling proteins (UCP) are members of the larger family of mitochondrial anion carrier proteins (MACP). UCPs separate oxidative phosphorylation from ATP synthesis
	with energy dissipated as heat, also referred to as the mitochondrial proton leak. UCPs facilitate
	the transfer of anions from the inner to the outer mitochondrial membrane and the return

## Target Details

	transfer of protons from the outer to the inner mitochondrial membrane. They also reduce the
	mitochondrial membrane potential in mammalian cells. Tissue specificity occurs for the
	different UCPs and the exact methods of how UCPs transfer H+/OH- are not known. UCPs
	contain the three homologous protein domains of MACPs. Transcripts of this gene are only
	detected in brain tissue and are specifically modulated by various environmental conditions.
	Alternative splicing results in multiple transcript variants.
