	confining the holoenzyme to discrete locations within the cell. This gene encodes a member of
	the AKAP family. The encoded protein binds to the RII-beta regulatory subunit of PKA, and also
	to protein kinase C and the phosphatase calcineurin. It is predominantly expressed in cerebral
	cortex and may anchor the PKA protein at postsynaptic densities (PSD) and be involved in the
	regulation of postsynaptic events. It is also expressed in T lymphocytes and may function to
	inhibit interleukin-2 transcription by disrupting calcineurin-dependent dephosphorylation of
	NFAT.
