Target Details

Target:	GLIPR1
Alternative Name:	GLIPR1 (GLIPR1 Products)
Background:	This gene encodes a protein with similarity to both the pathogenesis-related protein (PR)
	superfamily and the cysteine-rich secretory protein (CRISP) family. Increased expression of this
	gene is associated with myelomocytic differentiation in macrophage and decreased expression
	of this gene through gene methylation is associated with prostate cancer. The protein has

	proapoptotic activities in prostate and bladder cancer cells. This gene is a member of a cluster on chromosome 12 containing two other similar genes. Alternatively spliced variants which encode different protein isoforms have been described, however, not all variants have been fully characterized.
