	alpha subunit of class I alcohol dehydrogenase, which consists of several homo- and
	heterodimers of alpha, beta and gamma subunits. Alcohol dehydrogenases catalyze the
	oxidation of alcohols to aldehydes. This gene is active in the liver in early fetal life but only
	weakly active in adult liver. This gene is found in a cluster with six additional alcohol
	dehydrogenase genes, including those encoding the beta and gamma subunits, on the long arm
	of chromosome 4. Mutations in this gene may contribute to variation in certain personality
	traits and substance dependence. [provided by RefSeq, Nov 2010],ADH1,Cancer,Endocrine &
