| Alternative Name: | APP (APP Products) |
| Background: | This gene encodes a cell surface receptor and transmembrane precursor protein that is cleaved |
| | by secretases to form a number of peptides. Some of these peptides are secreted and can bind |
| | to the acetyltransferase complex APBB1/TIP60 to promote transcriptional activation, while |
| | others form the protein basis of the amyloid plaques found in the brains of patients with |
| | Alzheimer disease. In addition, two of the peptides are antimicrobial peptides, having been |
| | shown to have bacteriocidal and antifungal activities. Mutations in this gene have been |
| | implicated in autosomal dominant Alzheimer disease and cerebroarterial amyloidosis (cerebral |
| | amyloid angiopathy). Multiple transcript variants encoding several different isoforms have been |
| | found for this gene. [provided by RefSeq, Aug |
