Target Details

Target:	PEX12
Alternative Name:	PEX12 (PEX12 Products)
Background:	This gene belongs to the peroxin-12 family. Peroxins (PEXs) are proteins that are essential for
	the assembly of functional peroxisomes. The peroxisome biogenesis disorders (PBDs) are a
	group of genetically heterogeneous autosomal recessive, lethal diseases characterized by
	multiple defects in peroxisome function. The peroxisomal biogenesis disorders are a
	heterogeneous group with at least 14 complementation groups and with more than 1
	phenotype being observed in cases falling into particular complementation groups. Although
	the clinical features of PBD patients vary, cells from all PBD patients exhibit a defect in the
	import of one or more classes of peroxisomal matrix proteins into the organelle. Defects in this
	gene are a cause of Zellweger syndrome (ZWS).,PEX12,PAF-3,PBD3A,Signal
