	Background: Human Rad1 is a component of a heterotrimeric PCNA like complex that also
	contains the Rad9 and Hus1 proteins. This complex is believed to be involved in cellular
	responses to DNA damage, possibly by associating with Rad17 and several components of the
	PCNA-loading heteropentamer, replication factor C. Human Rad1 exhibits significant homology
	to Rad1 from S. pombe, and its expression in yeast rad1 mutants has been shown to partially
	restore radiation resistance and G2 checkpoint activity. It has also been shown to possess
	exonuclease activity.
