#### **Target Details**

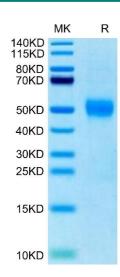

| Target:             | CD33   |
|---------------------|--|
| Alternative Name:   | Siglec-3 (CD33 Products)   |
| Background:         | Sialic-acid-binding immunoglobulin-like lectin (Siglec) that plays a role in mediating cell-cell interactions and in maintaining immune cells in a resting state. They are sialoadhesin/CD169/Siglec-1, CD22/Siglec-2, CD33/Siglec-3, Myelin-Associated Glycoprotein (MAG/Siglec-4a) and Siglecs 5 to 11. To date, no Siglec has been shown to recognized any cell surface ligand other than sialic acids, suggesting that interactions with glycans containing this |
|                     | carbohydrate are important in mediating the biological functions of Siglecs.   |
| Molecular Weight:   | 29.6 kDa. Due to glycosylation, the protein migrates to 48-58 kDa based on Tris-Bis PAGE result.   |
