## Target Details

Background:	FAM19A5 is a secretory protein that is predominantly expressed in the brain. Although the FAM19A5 gene has been found to be associated with neurological and/or psychiatric diseases, only limited information is available on its function in the brain. FAM19A5 plays a role in nervous system development from an early stage and increases its expression in response to pathological conditions in subsets of neurons and OPCs of the brain.
Molecular Weight:	10.79 kDa. The protein migrates to 13-14 kDa based on Tris-Bis PAGE result.
NCBI Accession:	<a href="#">NP_056196</a>
