## Datasheet for ABIN730010 anti-GLP-1 antibody (AA 1-31) (FITC)

Overview

Quantity:	100 μL
Target:	GLP-1
Binding Specificity:	AA 1-31
Reactivity:	Human, Rat, Mouse
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This GLP-1 antibody is conjugated to FITC
Application:	Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))

## Product Details

Immunogen:	KLH conjugated GLP-1 peptide
Isotype:	IgG
Cross-Reactivity:	Human, Mouse, Rat
Purification:	Purified by Protein A.

## Target Details

Target:	GLP-1
Alternative Name:	GLP-1 (GLP-1 Products)
Background:	Synonyms: GLP1, GLP2, GRPP, Glucagon, GCG

Background: Glucagon plays a key role in glucose metabolism and homeostasis. Regulates		
blood glucose by increasing gluconeogenesis and decreasing glycolysis. A counterregulatory		
hormone of insulin, raises plasma glucose levels in response to insulin-induced hypoglycemia.		
Plays an important role in initiating and maintaining hyperglycemic conditions in diabetes. GLP-		
1 is a potent stimulator of glucose-dependent insulin release. Play important roles on gastric		
motility and the suppression of plasma glucagon levels. May be involved in the suppression of		
satiety and stimulation of glucose disposal in peripheral tissues, independent of the actions of		
insulin. Have growth-promoting activities on intestinal epithelium. May also regulate the		
hypothalamic pituitary axis (HPA) via effects on LH, TSH, CRH, oxytocin, and vasopressin		
secretion. Increases islet mass through stimulation of islet neogenesis and pancreatic beta cell		
proliferation. Inhibits beta cell apoptosis. GLP-2 stimulates intestinal growth and up-regulates		
villus height in the small intestine, concomitant with increased crypt cell proliferation and		
decreased enterocyte apoptosis. The gastrointestinal tract, from the stomach to the colon is		
the principal target for GLP-2 action. Plays a key role in nutrient homeostasis, enhancing		
nutrient assimilation through enhanced gastrointestinal function, as well as increasing nutrient		
disposal. Stimulates intestinal glucose transport and decreases mucosal permeability.		
Oxyntomodulin significantly reduces food intake. Inhibits gastric emptying in humans.		
Suppression of gastric emptying may lead to increased gastric distension, which may		
contribute to satiety by causing a sensation of fullness. Glicentin may modulate gastric acid		
secretion and the gastro-pyloro-duodenal activity. May play an important role in intestinal		
mucosal growth in the early period of life.		

Gene ID:	2641
UniProt:	P01275
Application Details	

Application Notes:	IF(IHC-P) 1:50-200
	IF(IHC-F) 1:50-200
	IF(ICC) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 μg/μL

Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.
Expiry Date:	12 months
