Target Details		
Target Type:	Hormone	
Background:	Synonyms: Adrenomedullin, ADM, AM, Contains, RecName, Proadrenomedullin N-20 terminal	
	peptide, ProAM N-terminal 20 peptide, ProAM-N20, PAMP, ProAM-N20, ADML_HUMAN.	
	Background: Adrenomedullin (ADM), a vasodilator produced by most contractile cells, is	
	characterized by persistent hypotensive activity. ADM is involved in the regulation of fluid and	
	electrolyte homeostasis and in the maintenance of cardiovascular functioning. In hypertensive	
	patients, the level of ADM in plasma is up-regulated. Natriuresis is a common systemic	
	manifestation of aneurysmal subarachnoid hemorrhage. ADM has strong natriuretic actions.	
	ADM-induced natriuresis is caused by an increase in glomerular filtration rate and a decrease in	
	distal tubular sodium reabsorption. ADM is present both in the periphery and brain, and can	
	exert central effects such as decreasing food ingestion.
