Background:	Synonyms: Breast cancer metastasis-suppressor 1, BRMS1
	Background: Transcriptional repressor. Down-regulates transcription activation by NF-kappa-B
	by promoting the deacetylation of RELA at 'Lys-310'. Promotes HDAC1 binding to promoter
	regions. Down-regulates expression of anti-apoptotic genes that are controlled by NF-kappa-B.
	Promotes apoptosis in cells that have inadequate adherence to a substrate, a process called
	anoikis, and may thereby inhibit metastasis. May be a mediator of metastasis suppression in
	breast carcinoma.
