| Alternative Name: | EBP1/PA2G4 (PA2G4 Products) |
| Background: | Background: EBP1, also known as PA2G4, is an RNA-binding protein which belongs to the peptidase M24 family. It can be detected n several cell lines tested, including primary and |
| | transformed cell lines. EBP1 also present in pre-ribosomal ribonucleoprotein complexes and |
| | may be involved in ribosome assembly and the regulation of intermediate and late steps of |

| | rRNA processing. This protein is a transcriptional co-repressor of androgen receptor-regulated |
|---------------------|---|
| | genes and other cell cycle regulatory genes through its interactions with histone deacetylases. |
| | PA2G4 can interact with the cytoplasmic domain of the ErbB3 receptor and may contribute to |
| | transducing growth regulatory signals. EBP1 has been implicated in growth inhibition and the |
| | induction of differentiation of human cancer cells. It seems to be involved in growth regulation. |
| | EBP1 also mediates cap-independent translation of specific viral IRESs (internal ribosomal |
| | entry site). |
