| | granule exocytosis, such as neutrophils, mast cells, platelets and endothelial cells. STXBP3, |
|--|---|
| | together with STX4 and VAMP2, may play a role in insulin-dependent movement of GLUT4 and |
| | in docking / fusion of intracellular GLUT4-containing vesicles with the cell surface in |
| | adipocytes. STXBP3 participates in the consolidation and secretion of secondary and tertiary |
| | granules. STXBP3 contains one SEC1 domain. Phosphorylation at Ser129 may stimulate |
| | granule release. Human STXBP3 shares 90% aa identity with mouse STXBP3. STXBP3 interacts |
| | with DOC2B; the interaction is direct, occurs at the cell membrane, excludes interaction with |
| | STX4 and regulates glucose-stimulated insulin secretion. Interacts with STX4. |
