Datasheet for ABIN7320025 CD22 Protein (Fc Tag)

Image

Overview

Quantity:	100 µg
Target:	CD22
Origin:	Mouse
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CD22 protein is labelled with Fc Tag.

Product Details

Purpose:	Recombinant Mouse Siglec-2/CD22 Protein (Fc Tag)
Sequence:	Met1-Arg708
Characteristics:	A DNA sequence encoding the mouse CD22 (BAE33829.1)(Met1-Arg708) was expressed with the Fc region of human IgG1 at the C-terminus.
Purity:	> 95 % as determined by SDS-PAGE
Endotoxin Level:	< 1.0 EU per μ g of the protein as determined by the LAL method.

Target Details

Target:	CD22
Alternative Name:	Siglec-2/CD22 (CD22 Products)
Background:	Background: CD22 is a member of the immunoglobulin superfamily, SIGLEC family of lectins. It is first expressed in the cytoplasm of pro-B and pre-B cells, and on the surface as B cells
	mature to become IgD+. CD22 serves as an adhesion receptor for sialic acid-bearing ligands

expressed on erythrocytes and all leukocyte classes. In addition to its potential role as a	
mediator of intercellular interactions, signal transduction through CD22 can activate B cells and	
modulate antigen receptor signaling in vitro. The phenotype of CD22-deficient mice suggests	
that CD22 is primarily involved in the generation of mature B cells within the bone marrow,	
blood, and marginal zones of lymphoid tissues. CD22 recruits the tyrosine phosphatase Src	
homology 2 domain-containing phosphatase 1 (SHP-1) to immunoreceptor tyrosine-based	
inhibitory motifs (ITIMs) and inhibits B-cell receptor (BCR)-induced Ca2+ signaling on normal B	
cells. CD22 interacts specifically with ligands carrying alpha2-6-linked sialic acids. As an	
inhibitory coreceptor of the B-cell receptor (BCR), CD22 plays a critical role in establishing	
signalling thresholds for B-cell activation. Like other coreceptors, the ability of CD22 to	
modulate B-cell signalling is critically dependent upon its proximity to the BCR, and this in turn	
is governed by the binding of its extracellular domain to alpha2,6-linked sialic acid ligands.	
However, genetic studies in mice reveal that some CD22 functions are regulated by ligand	
binding, whereas other functions are ligand-independent and may only require expression of an	
intact CD22 cytoplasmic domain at the B-cell surface. CD19 regulates CD22 phosphorylation by	
augmenting Lyn kinase activity, while CD22 inhibits CD19 phosphorylation via SHP-1.Immune

Synonym: A530093D23;Lyb-8;Lyb8	

Molecular Weight: 104.3 kDa

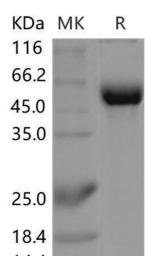

Application Details

Restrictions: For Research Use only

Handling

Format:	Lyophilized
Reconstitution:	Please refer to the printed manual for detailed information.
Buffer:	Lyophilized from sterile PBS, pH 7.4
Storage:	4 °C,-20 °C,-80 °C
Storage Comment:	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted
	samples are stable at < -20°C for 3 months.
