Target Details	
Background:	Background: Discoidin domain receptor 2 (DDR2) or CD167b (cluster of differentiation 167b) is
	a kind of protein tyrosine kinases associated with cell proliferation and tumor metastasis, and
	collagen, identified as a ligand for DDR2, up-regulates matrix metallloproteinase 1 (MMP-1) and
	MMP-2 expression in cellular matrix. DDR2/CD167b was found to recognise the triple-helical
	region of collagen X as well as the NC1 domain. Binding to the collagenous region was
	dependent on the triple-helical conformation. DDR2/CD167b autophosphorylation was induced
	by the collagen X triple-helical region but not the NC1 domain, indicating that the triple-helical
	region of collagen X contains a specific DDR2 binding site that is capable of receptor activation.
	DDR2/CD167b is induced during stellate cell activation and implicate the phosphorylated
	receptor as a mediator of MMP-2 release and growth stimulation in response to type I collagen.
	Moreover, type I collagen-dependent upregulation of DDR2/CD167b expression establishes a
	positive feedback loop in activated stellate cells, leading to further proliferation and enhanced
	invasive activity.Immune Checkpoint Immunotherapy Cancer Immunotherapy Targeted
