	more than 320 CD unique clusters and subclusters have been identified. Some of the CD		
	molecules serve as receptors or ligands important to the cell through initiating a signal cascade		
	which then alter the behavior of the cell. Some CD proteins do not take part in cell signal		
	process but have other functions such as cell adhesion. CD5 is a member of the CD system.		
	CD5 was found to be widely distributed in T-cells and B1 cells which is a subset of IgM-		
	secreting B cells. CD5 also was found expressed in small lymphocytic lymphoma, hairy cell		
	leukaemia and mantle cell lymphoma cells. CD5 serves to weaken the activating stimulus from		
	the BCR so that the B1 cells can only reflect to the very strong stimuli but not the normal tissue		
	proteins.
