Target Details

Target:	EpCAM (EPCAM)
Alternative Name:	EpCAM/TROP-1 (EPCAM Products)
Background:	Background: Epithelial Cell Adhesion Molecule (EpCAM), also known as GA733-2 antigen, is a type â transmembrane glycoprotein composed of an extracellular domain with two EGF-Like
	repeats and a cystenin-rich region, a transmembrane domain and a cytoplasmic domain. It

	modulates cell adhesion and proliferation. Its overexpression has been detected in many				
	epithelial tumours and has been associated with high stage, high grade and a worse sur				
	some tumour types. EpCAM has been shown to function as a calcium-independent homophilic				
	cell adhesion molecule that does not exhibit any obvious relationship to the four known cell				
	adhesion molecule superfamilies. However, recent insights have revealed that EpCAM				
	participates in not only cell adhesion, but also in proliferation, migration and differentiation of				
	cells. In addition, recent study revealed that EpCAM is the Wnt-beta-catenin signaling target				
	gene and may be used to facilitate prognosis. It has oncogenic potential and is activated by				
	release of its intracellular domain, which can signal into the cell nucleus by engagement of				
	elements of the wnt pathway.Immune Checkpoint Immunotherapy Cancer
