Background: PCDHA6 (Protocadherin alpha 6) is a member of the protocadherin family, a				
subgroup of the cadherin superfamily. Protocadherins are neural cadherin-like cell adhesion				
proteins that are integral membrane proteins. Their specific functions are unknown but they				
most likely play a critical role in the establishment and function of specific neuronal				
connections in the brain. PCDHA6 is one of fifteen tandemly arranged genes within the alpha				
cluster of protocadherin genes on 5q31.
