Target Details

Alternative Name:	IL-16 (IL16 Products)
Background:	<p>Synonyms: Interleukin-16, HGNC:5980, HsT19289, Interleukin 16 precursor, LCF, Lymphocyte Chemotactic Factor, IL16, Lymphocyte chemoattractant factor, PrIL16, IL16_HUMAN.</p> <p>Background: IL16 is a proinflammatory cytokine that is chemotactic for CD4+ T lymphocytes, monocytes, and eosinophils. IL16 is synthesized as a precursor molecule (pro IL16) of approximately 68 kDa and 631 amino acid residues lacking a signal peptide. The sequence and structure of IL16 is conserved across species. In addition to inducing chemotaxis, IL16 upregulates the IL2 receptor and upregulates HLADR expression. It also inhibits T cell receptor (TCR)/CD3 dependent activation, and suppresses HIV1 replication in vitro. Sources of IL16 include epithelial cells, mast cells, T lymphocytes (CD4+ and CD8+), macrophages, synovial fibroblasts, and eosinophils.</p>
