Background:	Synonyms: HK2, HCK1, PCN1, ATFB7, HPCN1, KV1.5, Potassium voltage-gated channel subfamily A member 5, Voltage-gated potassium channel HK2, Voltage-gated potassium

Target Details

channel subunit Kv1.5, KCNA5

Background: Mediates the voltage-dependent potassium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a potassium-selective channel through which potassium ions may pass in accordance with their electrochemical gradient. This channel displays rapid activation and slow inactivation. May play a role in regulating the secretion of insulin in normal pancreatic islets. Isoform 2 exhibits a voltage-dependent recovery from inactivation and an excessive cumulative inactivation.
