Abstract:	KLF2/4 Products		
Background:	Synonyms: EZF, GKLF, Krueppel-like factor 4, Epithelial zinc finger protein EZF, Gut-enriched		
	krueppel-like factor, KLF4		
	Background: Transcription factor, can act both as activator and as repressor. Binds the 5'-		
	CACCC-3' core sequence. Binds to the promoter region of its own gene and can activate its own		
	transcription. Regulates the expression of key transcription factors during embryonic		
	development. Plays an important role in maintaining embryonic stem cells, and in preventing		
	their differentiation. Required for establishing the barrier function of the skin and for postnatal		
	maturation and maintenance of the ocular surface. Involved in the differentiation of epithelial		
	cells and may also function in skeletal and kidney development. Contributes to the down-		
	regulation of p53/TP53 transcription.		
Gene ID:	9314		
UniProt:	043474
